OVERVIEW

This document describes the STSWTO function used for transmission of DTC Out Transfer Detail Activity.

Users who communicate with DTC via CCF-II (RJE, SNA/RJE or NDM) should read the appropriate CCF-II System User's Guide.

Users who communicate with DTC via CCFUSER software should read the CCF User's Guide before reading this document.

Additional prerequisites for a thorough understanding to this document are a familiarity with DTC operating procedures and a familiarity with computer operations.

THE STSWTO FUNCTION

A CCF/CCF-II User may utilize the STSWTO function in order to receive DTC Out Transfer Detail Activity information. When using the STSWTO function, the CCF/CCF-II User will receive a series of machine-readable records. Each record corresponds to an Out Transfer transaction which has updated a Participant's account activity.

The STSWTO function informs the User of completed WT items which DTC has received from the transfer agent, in addition to completed Direct Mail by the Agent (DMA) and by the Depository (DMD) items. New Certificate detail is not included

The information received via the STSWTO function may be used to automate the updating of a User's files and verification of the transaction processing sent by the User to DTC.

Availability of STSWTO

The STSWTO function will generally be available from approximately 6:00 p.m. until 2:00 p.m. the next day.

STSWTO RECORD FORMATS

The CCF Header Record

The first record on the function file will be a Header Record when "HEADER=YES" is specified as a CCFDTFDB parameter. The Header Record contains information regarding the creation of the file.

Note:

NDM Users executing NDMDTF01 and RJE 3770 Users executing RJE SDTF2 will receive the CCF Header Record. These Users will not receive the CCF-II Header and Trailer Records described on the following page.
