# OBJECTIVES OF THIS CHAPTER

The objectives of this chapter are:

- Give an overview of DOX1/DOX5 NDO1/NDO5 INPUT functions
- Illustrate the formats of required records

# DOX1/DOX5, NDO1/NDO5 OVERVIEW

Functions DOX1/NDO1 are used for MQ transmissions; DOX5/NDO5 are used for CF2. The functionality does not change between input media.

## The DOX1/DOX5 Function

A Day Deliver Order (DOX1/DOX5) is a transaction received by the Depository Trust Company requesting immediate transfer of a specified quantity of a security, having a stated value, from one DTC participant to another. The "delivering" participant initiates the request, while an eligible, "receiving" participant receives the security.

## The NDO1/NDO5 Function

A Night Deliver Order (NDO1/NDO5) is a transaction received by the Depository Trust Company requesting transfer of a specified quantity of a security, having a stated value, from one DTC participant to another. In the "NDO1/NDO5" function, transactions are batched and transmitted to DTC between the hours of 3:00 a.m. and 11:00 p.m., and do not affect the Participant's account until the next business day.

A User may use the DOX1/DOX5 function to transmit a day cycle Deliver Order transaction to DTC starting at 3:00 a.m. and continuing throughout the business day based on the Cutoff Time Schedule for DOX1/DOX5 Transmissions.

## NDO1/NDO5 and DOX1/DOX5 Transmissions

When using the NDO1/NDO5/DOX1/DOX5 functions, the User transmits night/day cycle deliver order transactions to DTC and receives responses indicating any errors that have been detected in the transmitted transactions.

If the transactions transmitted to DTC via NDO1/NDO5 and/or DOX1/DOX5 are considered critical, the User should prepare procedures to be invoked in the event the transmission media is unavailable.

## Cutoff Time Schedule for DOX1/DOX5 Transmissions

### Valued Original and Non-matched Reclaims

Transactions will be accepted:

- Between 3:00 a.m. and 2:45 p.m. and are subject to normal RAD (Receiver Authorized Deliveries) Rules as described in the SDFS manual.
- Between 2:45 p.m. and 3:05 p.m., all transactions are forced to RAD.

### Valued Matched Reclaim

Transactions will be accepted between the hours of 3:00 a.m. and 3:05 p.m.

### Valued Original and Non-matched Reclaim

Transactions between a deliverer and its Settling Bank will be accepted between 3:00 a.m. and 4:45 p.m.

---

#### Note:

After 2:45 p.m., these transactions will be forced to RAD.

---

### Free MMI New Issuances and Turnaround DO

Transactions will be accepted between the hours of 3:00 a.m. and 4:45 p.m.

**Free Non-MMI**

Transactions will be accepted between the hours of 3:00 a.m. and 6:00 p.m.

**Free MMI existing CUSIP**

Transactions will be accepted between the hours of 3:00 a.m. and 6:00 p.m. These transactions will always be processed through the RAD system.

---

**Note:**

Valued transactions are those with a dollar amount greater than zero. Free transactions are those with a dollar amount equal to zero. RAD (Receiver Authorized Deliveries) may be approved or canceled through PTS or MQ until the following times:

- 3:30 p.m. for Valued Transactions
  - 5:00 p.m. for Values Settling Bank Transactions
  - 6:30 p.m. for Free Transactions
- 

**Note:**

The times listed above describe the cutoff times for input. The position update at DTC will usually be between 5-15 minutes later than the input time.

---

## Cutoff Time Schedule for NDO1/NDO5 Transmissions

All transmitted NDO1/NDO5 transactions will be accepted between the hours of 3:00 a.m. and 11:00 p.m. daily. The actual transfer of security position between Participant's accounts takes place during DTC's night cycle processing.

NDO1/NDO5 and DOX1/DOX5 test transmissions (where the Production Test Indicator = "T") will be accepted during PTS operating hours. In no event will deliver order transactions be accepted after the cutoff times specified above.

Any DOX1/DOX5 or NDO1/NDO5 transmission initiated prior to cutoff will be allowed to continue to completion.

## Modes of Transmission

The Deliver Order/Night Deliver order functions are available via CF2 and MQ, where processing has been enhanced to provide interactive receipt and distribution of data. MQ users should note that unlike native MQ, no recovery block is sent with the next signon after a failed transmission. For more information, contact [DTCSupport@dtcc.com](mailto:DTCSupport@dtcc.com).

# DELIVER ORDERS, NIGHT DELIVER ORDERS

Each application data record consists of:

- A transaction header that contains six communication-oriented fields, for a total of 26 characters
- The deliver order/night deliver order input (detail) file

If an input file does not meet edit criteria, DTC returns it to the submitter in an output record, preceded by a mailbox prefix and followed by an error block to identify the field(s) in error.

Potential errors are listed in [DOX1/DOX5 NDO1/NDO5 Error Codes](#). A full description of this processing is contained in Interface Control Manager (Transaction Input).

All fields indicated as DTC Validation = Yes are validated.

# DOX1/DOX5 NDO1/NDO5 ERROR CODES

The machine-readable input error codes are a combination of the field in error (a 4-byte field code) and the error type (a 4-byte reason code). The resultant 8-byte error codes identify the specific fields and the types of errors that prevented an input message from being processed. Inputs containing one or more errors are returned to the submitter for correction. The following error code table is sorted alphabetically by field code (column one) and then by reason code (column two).
