INTRODUCTION TO RECEIVER AUTHORIZED DELIVERY

RAD allows you to review and either approve or cancel incoming deliveries before they are processed so you can avoid reclamations.

You can route the following transaction types through RAD:

- Deliver Orders (DOs)
- Payment Orders (POs)
- Valued pledges
- Valued releases

Cutoff Times

RAD output is generated real-time when a transaction is sent to RAD. For ID trades and NDOs (night deliver orders), transactions are sent to RAD in the night cycle.

For day transactions, the cutoff times are:

- Valued MMI Issuances—2:45 p.m.
- Valued DO/PO/Pledges—3:30 p.m.
- DO to Settling Bank—5:00 p.m.
- Free DOs—6:15 p.m.

RAD OUTPUT TRANSACTION

This output provides the user with notification messages for transactions subject to RAD processing.

The First 74 bytes of the transaction comprises the MQ header. The next 20 bytes comprises the Message prefix. The remaining bytes comprise the actual data transaction.
